RAJESH SOOD, MBA

Senior DevOps Engineer · AI/ML Infrastructure · Platform Engineering · AWS · CI/CD · Security at Scale

soodrajesh87@gmail.com | linkedin.com/in/rajeshsood | github.com/soodrajesh | Dublin, Ireland

PROFESSIONAL SUMMARY

DevOps Engineer with 15+ years in enterprise cloud, whose scope has expanded well beyond the title — over the last 3 years I've moved from core DevOps into designing AI/ML infrastructure and platform engineering, on top of continuing to own security and release engineering at scale. I identified the gap and built a production ML inference system on AWS Bedrock embedded directly into CI/CD, designed and built AWS environments from zero into governed, self-service platforms, and led a 15,000+ finding enterprise security remediation program end-to-end — as the sole engineer accountable for the outcome. I now operate at the intersection of platform engineering, AI/ML infrastructure, and security, setting technical direction rather than just executing a ticket queue.

CORE TECHNICAL COMPETENCIES

AI/ML Infrastructure	AWS Bedrock (Claude) — production ML inference embedded in CI/CD, automated failure analysis · GenAI-augmented ops tooling design
Platform & Cloud Architecture	AWS (EC2, VPC, VPN, IAM, ALB, Route53, PrivateLink, Secrets Manager, Lambda, RDS), Azure, GCP, OCI — 15+ yrs, greenfield to production across 5 companies
Security & Vuln Mgmt at Scale	Wiz, Snyk, OWASP ZAP, Snyk, CISA KEV/CVE remediation · IAM governance (SOC 2) · owned 15,000+ finding enterprise RBVM program
IaC & Policy-as-Code	Terraform, CloudFormation, Checkov, Ansible — led CFN-to-Terraform migration; authored compliance baselines across multiple AWS regions
CI/CD & Release Engineering	Jenkins, GitHub Actions, Groovy pipelines, RPM/AMI build systems
Reliability & Observability	EKS/HA operations, incident command, on-call ownership · Splunk, Datadog, Prometheus/Grafana
Scripting Languages	Python, Bash

CERTIFICATIONS

★ **AWS Certified Generative AI Developer – Professional** (Valid Nov 2029) | credly.com/users/rajeshsood
★ **AWS Certified Solutions Architect – Professional** | credly.com/users/rajeshsood
Previously Certified: Google Cloud Professional Architect · Oracle OCI Architect Professional & Associate

PROFESSIONAL EXPERIENCE

DevOps Engineer · Confidential · Dublin, Ireland *Oct 2023 – Present*

Joined as DevOps Engineer; scope expanded into AI/ML infrastructure and platform engineering as I identified and led initiatives beyond the original mandate — now the sole owner of AWS infrastructure, AI/ML-augmented tooling, security posture, and release engineering estate.

- **AI/ML Infrastructure:** Recognized manual failure triage as a platform gap and designed a production ML inference system on AWS Bedrock, embedded directly into CI/CD — stage-scoped log capture, generic traceback extraction, named failure-pattern detection — now live across 10+ production pipelines. Owned the architecture end-to-end: model integration, inference triggering, and rollout, not just prompt-level tooling. This work moved me from executing DevOps tickets to designing AI/ML infrastructure the team now depends on.
- **Platform Engineering:** Designed and built a governed AWS environment from zero into a self-service platform — VPN, IAM, private connectivity, identity integration, internal DNS, artifact-repository access — giving engineering teams an isolated dev/pre environment independent of legacy infrastructure. Sole technical owner from design through production handoff — platform engineering work outside the original DevOps role.
- **Security & Vulnerability Program Ownership:** Owned an org-wide vulnerability remediation program (RBVM) spanning 3 platforms — closing ~15,000+ findings via dependency upgrades, host hygiene, and phased release planning, including CISA KEV/CVE fixes. Set remediation strategy and prioritization for the org, not just individual fixes — host hygiene work alone removed 350-400 findings per platform with zero code change.
- **Release Engineering at Scale:** Own the full release pipeline for 3 core platforms: RPM build on Amazon Linux 2023, AMI packaging, EC2 rollout, ALB/CloudWatch configuration, QA, and production certification — led full RBVM release cycles end-to-end.
- **Infrastructure Modernisation:** Led the migration from CloudFormation to Terraform and introduced Checkov for policy-as-code enforcement — moved security compliance from manual review to pipeline-enforced, a strategic shift I drove, not just implemented.
- **Platform Consolidation:** Decommissioned legacy content-management and data-warehouse systems and non-standardized compute instances, reducing attack surface and recurring infra cost — a cleanup initiative I identified and scoped independently.

- **Operational Ownership:** Sole owner of the Jenkins controller/agent fleet for the org; closed 700+ infrastructure tickets spanning security, releases, access, and platform operations.

Cloud Infrastructure Engineer (SRE) · Protego Technologies · Dublin, Ireland *Sep 2022 – Oct 2023*

- **Observability Architecture:** Built and supported multiple EKS Clusters, global observability stack (Splunk + Datadog + Prometheus) with SLO/SLI alerting, reducing MTTR by 45% across high-availability financial services workloads.
- **Security Posture:** Integrated Snyk and OWASP ZAP into automated pipelines as shift-left controls, reducing production vulnerabilities by 40%.
- **Reliability Engineering:** Owned EKS cluster operations for HA financial services — capacity planning, incident command, and runbook-driven on-call rotation.

Cloud SysOps Engineer (Lead) · Hilti Asia IT Services · Kuala Lumpur, Malaysia *Dec 2019 – Aug 2022*

- **Cost Optimisation:** Delivered $120K in annual savings through Reserved Instance strategy and resource lifecycle automation across multi-region AWS.
- **Global Standardisation:** Authored CloudFormation templates enforcing security and compliance baselines across 10+ AWS regions and business units.
- **Compliance Leadership:** Led IAM governance program ensuring controls met enterprise SOC 2 and internal audit standards.

Cloud Service Engineer · MAXIS Sdn Bhd · Kuala Lumpur, Malaysia *Jul 2018 – Dec 2019*

- **Scale Migration:** Architected and migrated 30+ enterprise applications to AWS with HA/DR configurations and zero-downtime cutovers.
- **RI Strategy:** Spearheaded Reserved Instance purchasing program, reducing cloud expenditure by 15% ($80K annually).

IT Service Delivery Consultant III (L3) · DXC Technology (formerly HPE) · Cyberjaya, Malaysia *Feb 2017 – Jun 2018*

- **Multi-Cloud Operations:** Provided L3 architectural support across hybrid environments (AWS, Hyper-V, VMware), managing 300+ EC2 instances across 8 enterprise accounts.
- **Automation:** Developed health-check and remediation scripts that significantly reduced application downtime and manual escalation.

EARLIER CAREER

- Senior VMware Administrator (L3) · Softenger Malaysia (HPE client) · Oct 2016 – Jan 2017
- Senior IT OS Analyst · Optum / UnitedHealth Group, Noida · Nov 2014 – Oct 2016 — IaaS automation with HP BSA Suite; vSphere and vRealize Automation for self-service provisioning.
- Associate Professional · CSC India (now DXC) · Oct 2012 – Nov 2014 — Windows/Linux environments and VMware vSphere administration.
- Dell International & HCL India · Jul 2010 – Oct 2012 — Enterprise technical support, Active Directory, and network device administration.

EDUCATION

MBA in Information Technology | Sikkim Manipal University, India | 2015

B.E. in Computer Science | Visvesvaraya Technological University, Karnataka, India | 2010
